

Application Security Review

In years past critical data was stored on large computers internal to an organization's network. Many of today's interfaces to the same data are now done through web applications. Financials, credit card, healthcare, and personally identifiable data are no more than a few clicks away. The increase in using web applications has brought the need for a stringent analysis of these deployed web applications.

The Approach

The team at Idea uses an approach that allows for a holistic view of the security posture of web applications. This involves looking at core areas of your application and its operating environment. Idea Information Security uses a custom methodology that involves a detailed review of the following areas:

Large Application Pricing

In today's economy conserving valuable budget is a priority.

Idea Information Security continues to provide the highest level of guidance in testing and has eliminated variable pricing from the equation.

Let us scope your next applications and provide your company with the results you demand and the value you need.

	1 – 10 Applications	11 – 20 Applications	20 + Applications
Cost Per Application	\$16,500.00	\$15,000.00	\$13,000.00

Small / Medium Application Pricing

	1 – 10 Applications	11 – 20 Applications	20 + Applications
Cost Per Application	\$12,000.00	\$11,000.00	\$10,000.00
