

CSO to GO

Your Virtual Chief Security Officer

Let Idea provide your organization with an outsourced Information Security Solution that has been developed to ensure your enterprise is taking a proactive approach regarding Information Security. Often times organizations are forced to distribute security related responsibilities to various staff members within the organization. Although this model can be less expensive than on-boarding fulltime INFOSEC professionals, it often leads to a disjointed Information security program and some cases, system breach or data compromise.

Idea understands the existing state of our economy and recognizes that organizations are looking for a cost effective solution that facilitates a secure environment. Idea has developed the CSO (Chief Security Officer) to GO service which does just that!

Idea's CSO to GO service is based on an outsourced model which includes standard Managed Security Service Provider (MSSP) offerings along with on-site security consulting from one of our Senior Level Information Security professionals. The components making up the CSO to GO service are modular, but together offer customers a cost effective solution for securing an enterprise and acquiring their very own Chief Security Officer.

- Managed / Monitored IDS
- Managed / Monitored Firewall
- Managed Vulnerability Scanning (Internal / External)
- Managed Penetration Testing (Application / Network)
- Policy / Process Development and Maintenance
- Incident Response

About Us

Idea Information Security offers organizations in all verticals, security solutions that are tailored around regulatory compliance and best practices.
